

## **Principal Software Engineer - Backend**

### **About Team:**

Xyz company's mission is to help customers express their emotions through jewelry. The Consumer Experience Technology team is an enabler to deliver the exceptional Consumer Experience and WoW business features in large scale websites, apps and backend systems.

### **What do we expect:**

- 10+ years of experience in building large scale, high performance and reliable API, backend platforms and applications.
- Experience in programming knowledge with Ruby on Rails and Node.JS and exposure to Golang or PHP or Java.
- Experience in developing RESTful/GraphQL APIs and microservices using Relational/NoSQL databases and caching.
- Experience in scaling applications using event driven and asynchronous I/O frameworks.
- Be a technology counsel to all junior and senior engineers for design and architecture.
- Ability to collaborate with various stakeholders across the organization - product, design and business teams and technology decision making.
- Experience in scaling, performance optimization of application and platforms and adhering to security and data compliance aspects.
- Experience in TDD, CI & CD, Code quality and design and architecture best practices.
- Good experience in setting up best practices in engineering excellence and delivering nonfunctional requirements.
